

WHO WE ARE

Waste2Resource is a customer focused, innovative and forward thinking waste management company. Our activities are focused on the following key areas:

- Maximising the value from waste and recyclables through our UK and overseas supplier network;
- The brokerage of suitable waste streams into alternative fuels;
- The provision of a service led Total Waste Management package to our Clients;
- Project management from concept to delivery of waste to energy and recycling schemes; and
- Bespoke waste consultancy to a range of Clients from across the waste sector.

With a management team combining over 40 years of experience within the waste industry, we pride ourselves on providing a professional approach to waste management and delivering a high level of customer service.

Did you know W2R...

- Manages over 50000 tonnes of material each year
- Maintains a 100% planning success rate for waste infrastructure projects
- Removed over 10000 tonnes of waste from sites blighted by waste
- Exports 1000's of tonnes of waste for energy recovery, avoiding landfill and conserving valuable resources

WHAT WE DO

Total Waste Management Solutions

W2R's Total Waste Management solutions are designed around your specific needs. As a first stage to delivering our Client's a lower cost higher quality service, we conduct a site audit to determine the following headline information:

- Waste arisings by type, volume and business location
- Current waste management infrastructure and collection method
- Cost analysis, including benchmarking of material rebates
- Identification of any contractual constraints with existing suppliers

Waste Consultancy

W2R is able to offer bespoke advice to a range of Clients whether you are looking to improve site waste management practices, increase recycling rates, or export waste for recovery outside of the UK. Whilst W2R is a small industry focussed team, we have in place a range of carefully selected suppliers who provide direct support services to our business in specific areas. This allows us to minimise our overhead and ensure that we deliver added value low-cost services to our Clients.

Site Clearance

W2R is experienced in the recovery of distressed assets that are unusable due to the presence of waste. We have acted for landlords to recover property where waste companies have gone into administration by covering the following key areas;

- Initial Site Survey with a Full Risk Assessment and Duty of Care audit trail
- Plant and Contractor Hire, Skip and Bulk Transport Management
- Post completion and Environment Agency sign-off audit pack

Movement of RDF

W2R is active in the management of alternative fuels. We are working with several UK waste managers and industrial waste producers to route material suitable for RDF production in these fuel streams. W2R focuses on providing a technical assessment of feedstock and brokering suitable materials into dedicated RDF processors.

We are currently managing around 3000-5000 tonnes per month of material having established strong relationships with several European companies. We have recently commenced the movement of RDF material to our fuel supply contacts in several German locations.

WHO WE WORK WITH

Anglesey
Aluminium
Metal Ltd

“Their insight into the sector combined with their hands on assistance on issues varying from monitoring a site remediation programme to skip recovery agreements has proved to be invaluable.”

“Overall we are impressed with their professionalism and their degree of engagement to ensure continued successful reductions of waste management costs.”
